

Box plot showing the distribution of \log_2 WT expression (log2 of whitefly expression) for various genes. The y-axis ranges from 0 to 14. The x-axis lists genes: pspA, pspB, pspC, pspD, pspE, pspG, ihfA, and pspF. pspA, pspB, pspC, pspE, and pspG show low expression levels (median around 1-2). pspD shows slightly higher expression (median around 3). ihfA and pspF show significantly higher expression levels (median around 8-9). Outliers are present for all genes, with ihfA and pspF having many more outliers at higher expression levels.
